

May 29, 2018

To Each Member of the House Energy Policy Committee:

I respectfully ask you NOT to let SB637, SB894, or any other 5G infrastructure bills out of your committee. Please promote out of committee, instead, HB4220.

Of course, we all want maximum connectivity, but it need not be done by forcing untested, inescapable, and proven-dangerous electromagnetic radio frequency radiation onto everything in Michigan, including people, plants, and animals.

Many people are unable to tolerate exposure to radiation even less intense than 5G. And some, who thought such exposure was fine, have later been disabled by it.

So, don't you think forcing this on all of us would be tyrannical? (not to mention ugly)

Why couldn't you, as members of the House Energy Policy committee join in agreement that safety and consumer choice would be your #1 policy priorities?

With that in mind, **why couldn't you promote the use of fiber optics and hard wiring directly to all non-mobile electronic devices?** Wired service does not carry the dangers of wireless electromagnetic radio frequency radiation. Hard wiring is easily upgraded from either end, and is far more cyber-secure.

Individuals served by hard wiring are not subject to data mining or hacking which, while remunerative for the wireless industry, has undermined personal safety and choice in numerous ways.

Please do your due diligence. Consider the research that has been funded independent of the wireless technology industry, and **protect the citizens and the environment you represent.**

The goal of connectivity which we all enjoy can be promoted safely, by promoting hard wiring for all non-mobile applications. In this way, you could steer Michigan citizens, and our beautiful environment, away from the often devastating effects of ever-increasing wireless radiation. You could protect us from the loss of our property rights, and the loss of redress from the harms of wireless radiation. You could allow us choice as to the technology we each wish to use, or be exposed to.

Please consider the long term safety and the consumer choice effects of your energy policy.

Thank you for your careful consideration of this important matter for Michigan, and **please join together to protect our safety and consumer choice in Michigan's energy policy.**

Cynthia Curtis,
Cheboygan
